### **DETAILED ACTION**

Claims 1-25 are pending in this application and subject to the following restriction.

#### ***Election/Restrictions***

Restriction is required under 35 U.S.C. 121 and 372.

This application contains the following inventions or groups of inventions, which are not so linked as to form a single general inventive concept under PCT Rule 13.1.

In accordance with 37 CFR 1.499, applicant is required, in reply to this action, to elect a single invention to which the claims must be restricted.

Group I, claims 1-19, drawn to an isolated nucleic acid comprising a control region of human PPAR $\gamma$  gene and vectors and host cells comprising the control region and methods of screening agents that modulate PPAR $\gamma$  expression using the control region.

Group II, claims 20, 21, 24 and 25, drawn to a method of increasing the expression of human PPAR $\gamma$  in vivo.

Group III, claims 20, 22, 23 and 25, drawn to a method of decreasing the expression of human PPAR $\gamma$  in vivo.

Patent Cooperation Rules (PCT) Rules 13.1 and 13.2 permit in a single application only one invention. Unity of invention exists only when the shared same or corresponding technical feature is a contribution over the prior art. The inventions listed as Group I-III do not related to a single general inventive concept because they lack the same or corresponding technical feature and hence are restricted for lack of unity.

Specifically, Group I is drawn to a control region of PPAR $\gamma$  and vectors and host cells comprising the control regions. Group II is drawn to the increasing expression of human PPAR $\gamma$  in an animal by administering an agent that increases its expression. Group II is

Art Unit: 1636

drawn to the decreasing expression of human PPAR $\gamma$  in an animal by administering an agent that decreases its expression. The inventions of group I comprise isolated nucleic acid encoding the control region of PPAR $\gamma$ , which is not used in the inventions of Group II and III. The agents of group II and III do not overlap as one group increases expression while another decreases expression of endogenous PPAR $\gamma$ . Thus the claims do not embody a specific unifying technological feature and lack unity.

Applicant is reminded that upon cancellation of claims to a non-elected inventions, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a petition under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
